

ADDITIONAL NOTES ON THE GENUS VERBENA. XV

Harold N. Moldenke

VERBENA HALEI Small

Additional synonymy: Verbena halii Small ex Moldenke, Phytologia 36: 47, in syn. 1977.

Additional & emended bibliography: Loes., Verh. Bot. Ver. Brand. 53: 74. 1912; G. W. Thomas, Tex. Pl. Ecolog. Summa. 78. 1969; Bolkh., Grif., Matvej., & Zakhar., Chrom. Numb. Flow. Pl., imp. 1, 717 (1969) and imp. 2, 717. 1974; [Bard], Bull. Torrey Bot. Club 102: 431. 1975; E. H. Jordan, Checklist Organ Pipe Cact. Natl. Mon. 7. 1975; Moldenke, Phytologia 30: 142-143 & 159 (1975) and 31: 375, 377, & 378. 1975; Perkins, Estes, & Thorp, Bull. Torrey Bot. Club 102: 194-198. 1975; Anon., Biol. Abstr. 61: AC1.732. 1976; Hurd & Lindl., Smithson. Contrib. Zool. 220: 10. 1976; Ziegler & Schmer, Contrib. Herb. Univ. Wisc. LaCrosse 13: 16. 1976; Moldenke, Phytologia 34: 20, 250, 251, 270, & 279 (1976) and 36: 47, 128, 134, 135, 143, 152, & 157. 1977; A. L. Moldenke, Phytologia 36: 87. 1977.

Lewis and his associates encountered this plant along a stream-side in Coahuila. Demaree reports it as "common" on low ridges, at 670 feet altitude, in Texas. The Ellisons assert that it was "abundant in local population in full sun in sandy soil with V. brasiliensis, no hybridization evident", the corolla "bluish-lavender".

Other recent collectors refer to this plant as an upright perennial herb, 2 feet tall, and have encountered it in old rice fields, in sandy soil along roadsides, in open dry gravelly soils on railroad embankments, in "nearly level stiff or buckshot soils", on the river side of levees, in sandy dry open areas, and in "nearly level to gently sloping front lands", at 375 meters altitude. Brown refers to it as common on road shoulders in marshes; Allen found it abundant in open areas with V. temuisecta and Cynodon; Montz reports it infrequent on levee spillways with Ambrosia; and Bougere found it "not abundant, in small compact patches on roadsides". Ajour found it "abundant in very dry soil in shade with a lot of sedges and grasses".

The corollas are said to have been "deep-blue" on Ajour 11, "lavender" on Bougere 1087, Correll & Johnston 22127, and Luke s.n., "blue" on Allen 675 & 990, and Correll & Correll 12421, "purple" on Curry, Martin, & Allen 437, and "purple to lavender" on Killmer 35. Wendt and his associates found it growing "in saline and probably gypsiferous fine alluvial soil in matorral desértico inerme y con espinos laterales with fine mineralized alluvial soil in bajada", growing with Prosopis glandulosa, Koeberlinia spinosa, Condalia, Lycium, and Selinocarpus. Eger reports it common "in full sun in sandy soil of pine woods with Oxalis, Aster, and Lobelia". Higgins found it among "mixed grassland

shrubs with mesquite and oak predominating".

Brown & McFarlin note that there are "no appendages on the anthers". Mrs. Jordan (1975) calls the species "Hale's vervain". Perkins and his associates (1975) inform us that V. halei is highly autogamous (like V. urticifolia), the number, frequency, and pollen-carrying ability of insect vectors favor crosses of V. stricta Vent. with V. urticifolia L. and V. halei. They found that 12 plants of V. halei which were insect-visited and with 462 potential seeds had a 68 percent seed-set, while 15 bagged plants with only 391 potential seeds had a 54.5 percent seed-set. They found that the anthers and stigmas in V. halei are less than 1 mm. apart and the corolla-tube is straight, the plants are short (25-70 cm. tall) with an inflorescence of 10-58 branches (mean 26.4), each with only 2 flowers about 3.4 mm. apart at anthesis, and observed the following insects visiting the flowers: Diptera: Allograptia sp., Baccha sp. (with Verbena pollen on head), Systropus sp. (with pollen on head), and Villa sp.; Hymenoptera: Calliopsis andreniformis, Ceratina sp. (with pollen on head), Augochlorella striata, and Megachile sp. (with pollen on head); and Lepidoptera: Hemiarcus isola, Phycoides phaon (with pollen on head), and Strymon melinus.

Loesener (1912) cites Seler 3460 as "V. officinalis L. forma?" from Atascosa County, Texas. The C. M. Allen 1179, distributed as V. halei, is the type collection of xv. allenii Moldenke, while Ellis, LeDoux, & Watkins 964 is V. canescens H.B.K.

VERBENA HALEI f. ROSEIFLORA (Benke) Moldenke

Additional bibliography: Moldenke, Phytologia 28: 213 & 362. 1974.

VERBENA HASSLERANA Briq.

Additional bibliography: Moldenke, Phytologia 30: 143. 1975.

Pedersen comments that this species is found in moist meadows, on the banks of small streams, and elsewhere in Corrientes. He found it in flower and fruit in January, and the corollas on Pedersen 988 are described as having been "lilac" in color when fresh.

Additional citations: ARGENTINA: Corrientes: Pedersen 988 (N).

VERBENA HASSLERANA var. **GLANDULOSA** Moldenke

Additional bibliography: Moldenke, Phytologia 28: 351 & 464. 1974.

VERBENA HASTATA L.

Additional synonymy: Verbena pinnatifida Ph. ex G. Don in Loud., Hort. Brit., ed. 1, 247. 1830. Verbena laciniosa Schwae-gr. ex Moldenke, Phytologia 34: 279, in syn. 1976. Verbena paniculata L. ex Moldenke, Phytologia 34: 279, in syn. 1976. Verbena hastata var. paniculata Lam. ex Moldenke, Phytologia 34: 279, in syn. 1976.

Additional & emended bibliography: G. Don in Loud., Hort. Brit., ed. 1, 246 & 247 (1830) and ed. 2, 246 & 247. 1832; Loud., Hort. Brit., ed. 2, 552. 1832; G. Don in Loud., Hort. Additional illustrations: Ellison, Kingsbury, & Hyppio, Comm. Wild Fls. N. Y. [Cornell Ext. Bull. 990:] 19. 1973; A. & C. Krochmal, Guide Medic. Pl. U. S. 230, fig. 259. 1973; D. S. & H. B. Correll, Aquat. & Wetland Pl. SW. U. S., imp. 2, 2: [1398], fig. 654 g--k. 1975; F. H. Montgomery, Seeds & Fruits 201, fig. 6. 1977.

Montgomery (1977) describes the seeds of this species as "Nutlets 2.0 x 0.6 x 0.5 mm, similar to the previous species [V. bracteata], margins ridged, dorsal surface longitudinally 3-5-ribbed on the lower half and reticulate near the apex, inner faces papillose".

Wilson (1975) reports V. hastata frequent on streambanks and in low pastures and marshes in Holmes County, Ohio. Other recent collectors have found it on the shingle shores of lakes, in muck soil along drainage ditches, on prairies, by lakes with peat bogs along the shores, in meadows and ditches, on floodplains and open pond banks, in marshy land, and on gravel bars and rocky ground along creeks.

The corolla is said to have been "deep-purple" on W. D. Stevens 1633 and this collection also exhibits perfectly hastate leaves. On Correll & Correll 3003 $\frac{1}{4}$ the corolla was "lavender" and on Blake

11178 it was "violet-purple".

Hathaway & Ramsey (1973) record V. hastata from Pittsylvania County, Virginia. Churchill & Sutherland encountered it "in marshy banks of small pond depressions in cultivated fields with Salix, Cormus, Scirpus, and Asclepias in Otoe County, Nebraska. Thompson (1967) records it from Leelenau County, Michigan, noting that it grows there "along roadsides and in meadows. Common"; Hall & Thompson (1959) found it in Oakland County in the same state. Cooperrider (1962) reports it "frequent....Marshy places; stream banks; wet ditches" in Clinton and Jones Counties, Iowa. Davidson (1959) says that it is common "Usually in wet to moist open places, occasionally in upland woods and openings....Plants of dry soil, not recognizable as hybrids, differ considerably from those found in moist situations, those from the dry places being smaller with less incised leaves and more sparingly branched inflorescences." This is a very valid comment and I have frequently observed these differences, too, among others, in the field. I think that the dryland plants showing these characters deserve a form name.

Barker (1969) refers to V. hastata as "Occasional, along prairie drainage areas, in low prairie canyons, along margins of impoundments and streams. Occurs throughout the area [Kansas]." Stark (1974) asserts that it is usually found in "rich soils with high humus levels" and a pH level of 6.0, while Martin (1974) recommends it for "most open garden in sun with pH of 5-6.5". Taylor & MacBryde (1977) classify the corolla-color as "blue and violet" and gives its normal blooming period as June to September in British Columbia, where it is certainly var. scabra to which they are referring.

Don (1830) calls V. paniculata the "panicled vervain" and says that it was introduced into English gardens from "N. Amer." in 1800; he calls V. hastata, which he keeps as a separate species, the "halberd-leaved vervain" and gives its date of introduction from "Canada" as 1710, while he says that what he calls V. pinnatifida, the "pinnatifid vervain", came from "N. Amer." in 1810. Curiously, he places V. paniculata in his section Indivisae and the other two in section Trifidae.

Verbena laciniosa is based on an unnumbered collection from the Schwaegrichen herbarium now deposited in the herbarium of the Staatssammlung at Munich. The plant was originally cultivated in the Leipzig botanical garden and exhibits remarkably laciniate-lobed leaves. Probably it is deserving of form rank. It should also be noted here that very plainly hastate leaves are seen on the Herb. Schreber s.n. [Hort. Erl. 1770] & s.n. [Insul. Bahamen-sis] specimens cited below, clearly showing why Linnaeus applied the epithet "hastata" to this species and also showing Farwell's reason for separating the commonly found form of the species as var. paniculata. Personally, I feel that form rank would be more justified.

Rimpler (1970) reports the isolation of a new iridoid, hastatoside, from V. hastata. Gibbs (1974) reports that cyanogenesis

is absent in the shoots of this species, leucoanthocyanin is absent from the leaves, and syringin is absent from the stems, while the Ehrlich test gives negative results in the leaves and the Juglone test is negative in the stems and leaves but produces a blue fluorescence.

Scully (1970) reports that the Amerinds of North America used "vervain" in the treatment of colds and quite commonly against dropsy, with or without milkweed and decocted cottonwood leaves. Against jaundice they used it as a decoction alone or with any of the following where available: cinquefoil, parsley, oregon-grape, nettle-root, or columbine. Mixed with fat, it was used in treating swelling or hardening of the testicles, especially if accompanied by pain. As an infusion for quieting the nerves, a sponge bath and tea of verbena leaves is still used today among some tribes; for scurvy an infusion alone or mixed with wormwood or birch leaves is used. It is drunk as a tea in cases of smallpox to mitigate the suffering; as a tea also for sore throat and intestinal worms, especially in children. But Scully points out that in almost all cases vervain was not the first choice of possible medications. It is probable that several species of the genus are involved here.

Material of V. hastata has been misidentified and distributed in various herbaria as "V. hasta L." On the other hand, the Bresinsky s.n. [Lafayette, 12.7.1967], Correll & Correll 39844, Gilkey s.n. [July 31, 1945], Higgins 9712, MacDougal 566, A. R. Moldenke 1297, E. L. Reed 4034, Tharp 4504, Woodcox 55, and York & Rodgers 363, distributed as typical V. hastata, actually represent var. scabra Moldenke, Herb. Zuccarini s.n. [Hort. bot. Monac.] is a mixture of xV. baileyana Moldenke and V. officinalis L.; Chandrapanya 2 and Kirby 160 are V. brasiliensis Vell.; C. A. Brown s.n. [Sept. 30, 1936] is V. canadensis (L.) Britton; Engelmann s.n. [Banks of the Mississippi, July 1842] and Herb. Staatsberg. Minch. s.n. [Hort. Bot. Monac. 28.7.53] are xV. engelmannii Moldenke; Iltis, Bell, Melchart, Patman, & Witt 12361 is xV. perriana Moldenke; Hillebrand 1863 is V. robusta Greene; Meebold 19175 is V. simplex Lehm.; Herb. Kummer s.n. [Mississippi] is V. urticifolia L.; and Schroer 71 is V. xutha Lehm.

Additional bibliography: L., Hort. Cliff., imp. 1, 11 (1737) and imp. 2, 11. 1968; Moldenke, Phytologia 28: 217, 426, & 427 (1974) and 31: 409. 1975.

VERBENA HASTATA f. ROSEA Cheney

Additional bibliography: Moldenke, Phytologia 28: 352, 451, 464, & 465. 1974.

VERBENA HASTATA var. SCAERA Moldenke

Additional bibliography: D. S. & H. B. Correll, Aquat. & Wetland Pl. SW. U. S., imp. 2, 2: 1396, 1399, & 1775. 1975; A. L. Moldenke, Phytologia 31: 415. 1975; Moldenke, Phytologia 30: 146-148 (1975), 31: 374 & 376-378 (1975), and 34: 248-251. 1976.

Recent collectors have encountered this plant in moist soil, moist sandy loam, and moist loam at seeping springs in open grassland, at the edge of ponds, in Populus-Prosopis-Tamarix communities, and in the drier areas of bogs (as the typical form),

but also in "badly overgrazed pastures" (as the field form) — in fact, it has been described by some as a "weed in horse pastures", a typical field form habitat.

In addition to the months previously reported, it has been found in flower in October and at 4600 feet altitude (in Utah). Crutchfield reports it attaining a height of 6 feet (like the typical form and unlike the usual "field form"). Material has sometimes been misidentified and distributed in herbaria as V. stricta Vent. and as "V. hasta L."

The corollas are said to have been "purple" on Crutchfield 3525 and "deep-purple" on Crutchfield 3551 when fresh, as in the typical form.

The Spellenberg & Spellenberg 2082, distributed as V. hastata var. scabra, actually is V. macdougalii Heller.

VERBENA HATSCHBACHII Moldenke

Additional bibliography: Moldenke, Phytologia 28: 352. 1974.

The corollas are said to have been "violet" in color when fresh on Hatschbach 8558.

Additional citations: BRAZIL: Paraná: Hatschbach 8558 [Herb. Brad. 15182] (Mu).

VERBENA HAYEKII Moldenke

Additional bibliography: Moldenke, Phytologia 28: 218 & 252. 1974; Soukup, Biota 11: 18. 1976.

Richardson refers to this as a scattered prostrate plant in the rocky soil of roadsides, and the corollas on Richardson 2066 are said to have been "blue".

Additional citations: PERU: Junín: Richardson 2066 (Ld).

VERBENA HERTERI Moldenke

Additional bibliography: Moldenke, Phytologia 28: 352. 1974.

Additional citations: URUGUAY: Herter 979 [Herb. Herter 82378] (Mu—isotype).

VERBENA HIRTA Spreng.

Additional bibliography: Buek, Gen. Spec. Syn. Candoll. 3: 495. 1858; Moldenke, Phytologia 28: 352 (1974), 33: 480 (1976) and 34: 259. 1976.

Recent collectors have encountered this plant in secondary forests on laterite soil, on campos, in open scrub, in ruderal grasslands, and among ruderal vegetation on hills, flowering and fruiting in May, October, and November. Araujo refers to it as a heliophilous herb "crescendo em pasto a beira do precipício". The Tryons describe it as "woody at base, 0.5 m. tall". The corollas are said to have been "lilac" on Dziewa 3, Ferreira 97, and Kummrow 646 & 1049, "blue-purple" on Tryon & Tryon 6713, "blue-purple (5P5/8)" on Lindeman & Haas 5137, "purple" on Lindeman & Haas 300 "purple (2 1/2 P6/6" on Lindeman & Haas 4008, "purple (2 1/2 P6/8)" on Lindeman & Haas 18, "purple (2 1/2 P7/6" on Lindeman & Haas 2444, "purple, tube slightly paler (2 1/2 P5/8-6/4)" on Lindeman & Haas 2460, and "red" on Araujo 1262.

On Lindeman & Haas 2460 the entire plant is pronouncedly cinnamon-colored, but this is probably an effect produced by a layer of dust from its roadside habitat.

The Dusén s.n. [11.12.903] and Smith & Klein 13885, distributed as and previously cited by me as typical V. hirta, are better regarded as representing var. dusenii Moldenke, of which the former is the type collection.

Additional citations: BRAZIL: Paraná: Dziewa 3 (Ld); L. F. Ferreira 97 (Ld); Kummrow 646 (Ac), 1049 (Ld), 1123 (Ld); Lindeman & Haas 18 (Ws), 300 (Ac), 2444 (Ut-320417), 2460 (Ut-320416), 4008 (Ld). VERBENA HIRTA var. **DUSENII** Moldenke, Phytologia 33: 480. 1976.

Bibliography: Moldenke, Phytologia 33: 480 (1976) and 34: 259. 1976.

Collectors have found this plant growing on campos, on campos near the borders of planaltos, and in low woods, at 900—1000 m. altitude, flowering in November and December. Hitherto it has been confused with, and material has been distributed as, typical V. hirta Spreng.

Citations: BRAZIL: Paraná: Dusén s.n. [11.12.903] (N-type); Lindeman & Haas 3251d (Ut-320415). Santa Catarina: Smith & Klein 13885 (Ac, N).

VERBENA HIRTA var. **GRACILIS** Dusén

Additional bibliography: Moldenke, Phytologia 28: 352. 1974.

In addition to the months previously reported, this plant has been found in fruit in October. The corollas are said to have been "dark-lilac" on Hatschbach 35191.

The Reitz & Klein 17616 previously cited by me and distributed

as this variety actually is V. strigosa Cham.

Additional citations: BRAZIL: Paraná: Hatschbach 35191 (Ld).

VERBENA HISPIDA Ruiz & Pav.

Additional & emended bibliography: G. Don in Loud., Hort. Brit., ed. 1, 247 (1830) and ed. 2, 247. 1832; G. Don in Loud., Hort. Brit. Suppl. 1: 680. 1832; Loud., Hort. Brit., ed. 2, 552. 1832; Baxt. in Loud., Hort. Brit. Suppl. 2: 680. 1839; G. Don in Loud., Hort. Brit., ed. 3, 247. 1839; Baxt. in Loud., Hort. Brit. Suppl. [3]: 655. 1850; Buek, Gen. Spec. Syn. Candoll. 3: 494 & 495. 1858; Bolkh., Grif, Matvej., & Zakhar., Chrom. Numb. Flow. Pl., imp. 1, 717 (1969) and imp. 2, 717. 1974; R. D. Gibbs, Chemotax. Flow. Pl. 3: 1753—1755 (1974) and 4: 2295. 1974; Kooiman, Act. Bot. Neerl. 24: 464. 1975; Moldenke, Phytologia 30: 148. 1975; Soukup, Biota 11: 18. 1976; Moldenke, Phytologia 36: 33 & 151. 1977.

Don (1830) calls this the "hispida vervain" and says that it was introduced into English gardens from Peru in 1816. The corollas are described as having been "violet" in color when fresh on Krapovickas, Schinini, & Quarin 26557. López-Palacios describes the plant as "herba rastrera de hojas sésiles y muy pilosas, espigas cilíndricas y relativamente engrosadas".

Gibbs (1974) reports that cyanogenesis and leucoanthocyanin are absent from the leaves of this species and syringin is absent from the stems, while the Juglone test gives negative results in the leaves and bark.

The Pedersen 9867, cited below, collected in clay soil along roadsides in the Chaco, is said by Troncoso perhaps to be V. dermenii Moldenke, but I fail to discern the hybrid characters in the specimen cited. The Pavon collection cited below may be part of the type collection. The Herb. Kummer s.n. [Hort. bot. Monac.] is a mixture with V. rigida Spreng.

The Buchtien s.n. [Valdivia, 7/11/1902], distributed as V. hispida, actually is V. bonariensis L., while W. Forster s.n. [8.I. 1954] is V. parvula Hayek.

Additional illustrations: Voss in Vilm., Fl. Pleine Terr., ed. 3, 1: 1200 & 1201. 1870; R. E. Harrison, Handb. Bulbs & Peren. S. Hemisph., ed. 3, 267. 1971; Park Seed Co., Park Seeds Fls. & Veg. 1976: 90 (in color). 1976.

Misra (1970) makes the remarkable statement that xV. hybrida is a "Weed in shade" in Bihar, India, but Mukherjee also says of

it: "annual herb of waste places" in West Bengal. It would be interesting to know what cultivars are involved here and if they are breeding true or reverting to one of the several ancestral species. Blakeslee (1926) discusses the observed unlike reactions of different human individuals to the fragrance in Verbena flowers.

López-Palacios (1975), who found the red-flowered cultivar in cultivation at 1600 m. altitude in Ecuador and who credits the name to Vossler instead of to Voss, comments that "Esta hermosa planta jardánica está extendida por todo el territorio nacional [Venezuela]. Schauer, al hablar de la V. peruviana, de la que proceden las razas de flores rojas de la V. hybrida, dice: 'Planta floribus magnis splendide scarlatines maxime spectabilis, hortorum europeorum nunc tamen eximum decus.....eleganti colorum et foliorum varietate excellentes,' Apud DC. Prodromus 9: 537, sub V. chamaedrifolia. Lo que puede decirse no sólo de los jardines europeos, sino de todas las partes del mundo." Actually, of course, V. peruviana is NOT widely cultivated in gardens any more and has been replaced by the very common xV. hybrida, among whose multitudinous color forms I have never yet seen anything to match the brilliant splendor of the true wild V. peruviana!

Stewart (1972) cites the accepted binomial for this species as "V. hybrida Hort. ex Vilm. Fl. Pl. Terre Suppl. 195. 1865", but the only Supplement to this work existing either in the New York or Washington libraries is a supplement to edition 3 of 1884.

Knoche (1921) reports that in the Balearic Islands this plant is called "carmelita" and is there cultivated. Duque-Jaramillo found it in flower and fruit in March at 2620 meters altitude in Colombian gardens. Thomas (1969) calls it the "hybrid verbena". Williamson (1973) lists the very modern horticultural varieties "Amethyst" and "Miss Susie".

The Ardoin 21, distributed as xV. hybrida, actually is V. rigida Spreng.

xVERBENA ILLICITA Moldenke

Additional bibliography: Perkins, Estes, & Thorp, Bull. Torrey Bot. Club 102: 194, 195, & 197. 1975; Moldenke, Phytologia 30: 151 (1975), 34: 250 (1976), and 36: 157. 1977.

Perkins and his associates (1975) report finding this hybrid to be the most abundant of four natural hybrids occurring in a single area in Oklahoma, there having been about 20 individuals of it as compared to 10 of xV. goodmani Moldenke, 1 of xV. deamii Moldenke, and 1 of xV. perriana Moldenke. A single artificially cross-pollinated plant (using V. urticifolia L. pollen) with 168 potential seeds had a 12.5 percent seed-set, while the parental

species, V. urticifolia, had 47.3—66.5 percent seed-set and V. stricta Vent. (when insect-pollinated) had 76.3—87.6 percent.

Additional citations: ILLINOIS: Cass Co.: Geyer s.n. [Beardstown, July 1842] (Mu—411). MISSOURI: Saint Louis: Engelmann s.n. [St. Louis] (Mu—412).

VERBENA INAMOENA Briq.

Additional bibliography: Moldenke, Phytologia 30: 151 (1975), 34: 279 (1976), and 36: 131. 1977.

T. Rojas 10077, cited herein under V. bonariensis L., has been annotated by an unknown hand as "Verbena bonariensis L. f. transiens in V. inamomam Briq." The Herb. Mus. Bot. Landishuth s.n., also cited by me as V. bonariensis, has all its leaves very narrow-oblong in shape and may represent V. inamoena instead.

VERBENA INCISA Hook.

Additional synonymy: Verbena arenaria Hügel ex Moldenke, Phytologia 34: 278, in syn. 1976 [not V. arenaria Moldenke, 1961]. Verbena arenariana Kummer ex Moldenke, Phytologia 34: 278, in syn. 1976.

Additional bibliography: G. Don in Loud., Hort. Brit. Suppl. 1: 680. 1832; Loud., Hort. Brit., ed. 2, 552. 1832; Baxt. in Loud., Hort. Brit. Suppl. 2: 680. 1839; G. Don in Loud., Hort. Brit. Suppl. 2: 704. 1839; Baxt. in Loud., Hort. Brit. Suppl. [3]: 655. 1850; Vilm., Fl. Pleine Terre, ed. 1, 939 (1865), ed. 2, 2: 976 & 977 (1866), ed. 3, 1: 1200 (1870), and ed. 4, 1067. 1894; Moldenke, Phytologia 30: 150—152, 163, & 172 (1975), 31: 392 & 412 (1975), and 34: 270 & 278. 1976.

The corollas on Cristóbal 1210, Fabris 4688, and Krapovickas & al. 25759 & 27068 are described as having been "red", while on Herzog 1217 they were "cinnabar-red" and on Pflanz 951 "scarlet-red".

The cheironymous V. arenaria and V. arenariana listed in the synonymy above are based on specimens in the Munich herbarium collected, respectively, by Hügel in the Vienna and by Kummer in the Munich botanical garden. Don (1839) calls this species "Lady Arran's verbena".

Material of this species has been misidentified and distributed in some herbaria as V. phlogiflora Cham.

Fosberg encountered this plant in grassy places grazed by goats on the top of a low hill and the corollas on no. 27645 are said to have been "lavender" when fresh, while on Grandjot s.n. [XI.32] they were "rose-violet" in color.

Don (1830) lists V. multifida Ruiz & Pav. as a synonym of V. erinoides Willd. and implies that it, like V. erinoides, was introduced into English gardens from Peru in 1818. Tawada (1967) reports "V. erinoides Lamarck" as cultivated in Okinawa, but probably this is an error in identification for V. tenuisecta Briq. It should be noted here that Walker (1976) gives "1968" as the correct publication date for Tawada's work.

The Lorentz 478, distributed as V. lacinata, actually is V. aristigera S. Moore, while Merxmüller 24804 is V. berterii (Meisn.) Schan., Collector undetermined s.n. [H. L. 1840], is V. bipinnatifida Nutt., Lossen 72 is V. glandulifera Moldenke, Herter 1805 and Herb. Herter 96556 are V. pulchella Sweet, Martius s.n. [ad S. Joaç d'El Rey, Febr.] is V. regnelliana Moldenke, Herter 181 and Herb. Herter 79174 are V. selloi Spreng., and Brixle s.n., Herb. Hort. Monac. s.n., and Herb. Merxmüller 14336, as well as Kupper s.n. [cult. h. b. M.] are V. tenuisecta Briq.

VERBENA LASIOSTACHYS var. SEPTENTRIONALIS Moldenke

Additional bibliography: Moldenke, Phytologia 30: 153 (1975) and 36: 135. 1977.

Recent collectors have encountered this plant in dry places and "a few feet above high-tide line on coastal cliffs", at altitudes of 2—30 meters, and describe it as a widely branching herb, 6 dm. tall. The corollas are said to have been "blue" on Witham 508, "purplish" on Thorne & Tilforth 39918, and "purple" on Beauchamp 2523.

Material of this variety has been misidentified and distributed in some herbaria as V. bracteata Lag. & Rodr.

Molina R. refers to this species as a "weed common in sugar-cane plantations" in Nicaragua. Walker (1976) calls it "A weed of roadsides and waste places" on Okinawa, while Schlieben reports it "very abundant" on bush savannas in the Transvaal. On Saipan island Stone found it to be a "common weed with Asclepias curassavica, Conyza, Cardiospermum, etc." Herbst speaks of it as "uncommon" on Hauai island. Werff found it in the moist zone on Chatham island in the Galápagos and comments that there its flowers were "not as intensely colored as those of V. brasiliensis Vell.". Bianco describes it as 0.8--1.3 meters tall and "medicinal" in Venezuela; Taylor found it on steep roadside banks in Costa Rica.

The inflorescence tips on Molina R. 2724 are much congested because they are insect-galled; the corollas are said to have been "lilac" in color when fresh, as they were also on his no. 11508, on Hatschbach & Kummerow 35764, Romero-Castañeda 10668, and Schlieben 7691. They are said to have been "violet" on Pabst 7372 and Schinini & al. 10259, "blue" on Behn s.n. [14 Decbr. 1930], "blue-violet" on Plowman & Davis 4889, "bluish-violet" on Stone 5233, "pretty purple" on Clemens 42170, and "pale-blue" on Herbst 2296. On López-Palacios 4220 & 4332 they are described as "moradas", on 4196 "morado lila", on 4100 "lila", and on 4040 "azul morado hasta morado muy claro".

Hatschbach & Kummerow report V. litoralis being used medicinally in Brazil, while in Peru, according to Plowman & Davis, the dried ground-up leaves are placed on wounds.

It is not certain to what species Gibbs (1974) is referring when he uses the name "Verbena arborea", but such a binomial has been used for V. litoralis in the horticultural trade.

López-Palacios (1975) comments that "En París, en el Herbario HB, existe el N. 658 [of Bonpland], determinado como V. caracasana, que bien puede ser el tipo o, cuando menos, el esótipo" [of var. caracasana]. He continues: "Yo he examinado el material de Willdenow y no encuentro diferencia alguna con la V. litoralis HBK. El especímen 11134 Willd., Verbena lanceolata, corresponde al 638 de Humboldt (P), rotulado quizás por él mismo, o por Bonpland, V. caracasana, pero en mi concepto, no creo que alcance ni siquiera a una diferencia de variedad de la V. litoralis. También las poblaciones son aguas, y no se observa diferencia entre las de Caracas y las de Mérida, p. e. De la V. glabrata no hay constancia segura de que exista en el territorio venezolano. El ejemplar de Mocquerys, Duaea 893 ? No o fecha?), determinado por Doña N. Troncoso como V. glabrata es, simplemente, V. litoralis.

Muchos las consideran como coespecíficas....Para mí es difícil establecer la diferencia entre las dos especies. [actually V. glabrata H.B.K. as seen so abundantly in Ecuador is very easily distinguished in general aspect from V. litoralis!]. De existir en Venezuela, sería probablemente en Táchira y Zulia, hasta donde pueden extenderse las poblaciones colombianas del Norte de Santander, en donde la V. glabrata ha sido registrada."

López-Palacios 3638 is a close match for the type illustration of V. litoralis, but his 3948 is the very widespread loosely fruit-ed form, while his 3623 is the very dense-flowered and -fruited form now passing as var. caracasana. He reports that the plants growing in his own garden and represented by his no. 3974 were 80–100 cm. tall. In a letter to me, dated January 16, 1976, he says: "Por correo le envío 5 ejemplares de Verbena litoralis colectados de una misma planta que yo tengo cultivada. Este taxón es polimórfico y variable no sólo en la población sino en la misma planta, como Ud. podrá observar; en hojas y en espigas la variación es grande. Yo vi en Herb. Willdenow el tipo de la var. caracasana, pero en mi concepto todo ello es simplemente V. litoralis. Naturalmente esto es una cosa subjetiva y se deba a mi formación, influida por las escuelas europeas (Holandesa y Alemana) que tienen un criterio muy amplio de la especie. Naturalmente el dibujo de HBK sólo muestra un estadio de crecimiento y por tanto no puede registrar todas las variaciones de la especie." He suggests that his 1161 may be a form of V. brasiliensis Vell., and this is, indeed, very possible. It is also most probable that these two species hybridize when growing in close proximity, as they often do. His no. 4302, from the Galápagos islands, is described as "hierba de hojas medianas, espigas congestas luego alargadas".

Walker (1976) reports for V. litoralis the vernacular name, "hime-kuma-tsuzura" [=small delicate V. officinalis] on Okinawa. Witham collected the species at 1000 m. altitude in Hawaii, describing it as a "tough perennial" with blue flowers. Tovar Serpa (1975) records the vernacular name, "wirwena", for it in Peru. The Degeners & Pekelo (1975) list the names, "ha'uōwi", "'oi", and "ōwi", in Hawaii; Thomas (1969) calls it the "coast verbena".

Gibbs (1974) reports that in what he calls "Verbena arborea" cyano genesis is absent from the leaves and syringin is absent from the stems. It is not definitely known if he refers here to V. litoralis or to Petrea arborea, for both of which taxa the name "Verbena arborea" has in the past been used in literature. Hartwell (1971) reports that in Mexico V. litoralis is called "verbena del campo" and that the twigs are used to make a decoction drunk in the treatment of internal tumors. Krapovickas and his associates report its use in Salta, Argentina, "para golpe, pase sangre". Krapovickas, Schinini, & González 2840 represents the dense-spiked form of the species.

The Widgren s.n. [1845], distributed as V. litoralis, actually

is V. alata Sweet, while Lechler s.n. [Valdivia], Leyboldt s.n., and Montz 2289 are V. bonariensis L., Fabris & Marchionni 2392 is a mixture of V. litoralis and V. bonariensis, Behn s.n. VERBENA LOBATA var. HIRSUTA Moldenke

Additional bibliography: Moldenke, Phytologia 28: 253. 1974.

The corollas are said to have been "lilac" in color when fresh on Hatschbach 35664.

Additional citations: BRAZIL: Paraná: Hatschbach 35664 (Ld).

VERBENA LOBATA var. SESSILIS Moldenke

Additional bibliography: Moldenke, Phytologia 28: 355. 1974.

The corollas on Hatschbach HH.14883 are said to have been "dark-lilac" in color when fresh, and this collector encountered the plant in "brejo" (sedge meadow), flowering in October. It was distributed in some herbaria as typical V. lobata Vell.

Additional citations: BRAZIL: Paraná: Hatschbach HH.14883 [Herb.

Brad. 48010] (Mu).

VERBENA LONGIFOLIA Mart. & Gal.

Additional synonymy: Verbena longifolia H.B.K. ex Moldenke, Phytologia 36: 47, in syn. 1977.

Additional bibliography: Buek, Gen. Spec. Syn. Candoll. 3: 495. 1858; Moldenke, Phytologia 23: 296 (1972), 34: 252 (1976), and 36: 47 & 145. 1977.

The corollas are said to have been "white to pale-pink" on Ernst 2355a.

Additional citations: MEXICO: Oaxaca: Ernst 2355a (Mi).

VERBENA LONGIFOLIA f. ALBIFLORA Moldenke

Additional bibliography: Moldenke, Phytologia 28: 253 (1974), 34: 252 (1976), and 36: 145. 1977.

Martínez Calderón refers to this plant as an annual herb which he encountered at 5 m. altitude in "suelo arcilloso-arenoso in acahuall" and which he misidentified and distributed as V. carolina L. The Ernst 2355a, cited under typical V. longifolia (above), is said to have come from a population with white to light-pink flowers so it may, in part, at least, also represent this form.

Additional citations: MEXICO: Veracruz: Martínez Calderón 1352 (N.).

VERBENA LUCANENSIS Moldenke

Additional bibliography: Moldenke, Phytologia 23: 297. 1972; Soukup, Biota 11: 19. 1976.

VERBENA MACDOUGALII Heller

Additional & emended bibliography: Bolkh., Grif, Matvej., & Zakhar., Chrom. Numb. Flow. Pl., imp. 1, 717. 1969; G. W. Thomas, Tex. Pl. Ecolog. Summ. 78. 1969; Fong, Trojánskova, Trojánek, & Farnsworth, Lloydia 35: 147. 1972; Bolkh., Grif, Matvej., & Zakhar., Chrom. Numb. Flow. Pl., imp. 2, 717. 1974; R. D. Gibbs, Chemotax. Flow. Pl. 3: 1753 & 1754 (1974) and 4: 2295. 1974; D. S. & H. B. Correll, Aquat. & Wetland Pl. SW. U. S., imp. 2, 2: 1397, 1399—1400, & 1775. 1975; Kooiman, Act. Bot. Neerl. 24: 464. 1975; A. L. Moldenke, Phytologia 31: 415. 1975; Moldenke, Phytologia 30: 154 (1975) and 36: 145. 1977.

The Spellenberg's encountered this plant "along dirt road with grasses, in Douglas fir, Pinus, Quercus, and Holodiscus" association. Pinkava and his associates found it along roadsides in ponderosa pine forests — a habitat apparently identical to that in which my wife, my son, and I saw it in great abundance and which seems to be its favorite habitat. Higgins reports finding it in sandy soil of "short-grass prairie community", in sandy soil of "spruce-fir-pine community", and in "coarse sandy to gravelly soil in mountain brush and mixed evergreen community and aspen scattered in patches". Dziekanowski and his associates observed it in "very rocky yellow pine forests".

The corollas are said to have been "violet, fading to blue" on

Spellenberg & Spellenberg 2082. Thomas (1969) calls the species the "Macdougal verbena".

Gibbs (1974) reports cyanogenesis absent in the leaves of V. macdougalii and the Ehrlich test negative, but syringin is doubtfully present in the stems.

Material has been misidentified and distributed in some herbaria as V. hastata var. scabra Moldenke.

Additional citations: COLORADO: Archuleta Co.: C. F. Baker s.n. [Arboles, 7-10-99] (Mu-3912). NEW MEXICO: Otero Co.: Spellenberg & Spellenberg 2082 (N). Lincoln Co.: Higgins 8604 (N). San Miguel Co.: Higgins 8881 (N). Taos Co.: Higgins, Higgins, & Rook 10040 (N); Waterfall 12250 (Mi). Yavapai Co.: H. H. Rusby 780, in part (Mu). ARIZONA: Apache Co.: Lehto, McGill, Nash, & Pinkava 11506 (W-2734642); Pinkava, Lehto, & Reeves P.12352 (N). Coconino Co.: Dziekanowski, Dunn, & Bennett 2395 (N).

VERBENA MACDOUGALII f. ALBIFLORA Moldenke

Additional bibliography: Moldenke, Phytologia 28: 253, 254, & 431. 1974.

VERBENA MALMII Moldenke

Additional bibliography: Moldenke, Phytologia 23: 298. 1972; Troncoso, Darwiniana 18: 311 & 412. 1974.

Hatschbach describes this species as growing from a xylopodium. He found it on dry campos, flowering in December, and the corollas on his no. 35553 are said to have been "lilac" in color when fresh.

Additional citations: BRAZIL: Paraná: Hatschbach 35553 (Ld).

VERBENA MARITIMA Small

Additional synonymy: Verbena maritima Sm. ex Norman, Fla. Scientist 39: 30. 1976.

Additional bibliography: M. F. Baker, Fla. Wild Fls., ed. 2, imp. 1, 188. 1938; Ayensu, Rep. Endang. & Threat. Pl. Spec. 98 & 129. 1974; Moldenke, Phytologia 28: 254, 451. & 464 (1974) and 34: 248 & 279. 1976; M. F. Baker, Fla. Wild Fls., ed. 2, imp. 2, 188. 1976; Long & Lakela, Fl. Trop. Fla., ed. 2, 741 & 961. 1976; Norman, Fla. Scientist 39: 30. 1976; Moldenke, Phytologia 36: 142. 1977.

Ayensu (1974) has officially listed this as an endangered or threatened species. With the rapidity of the commercialization of the Florida beaches, the survival of this species, limited to that specialized habitat, is certainly in great doubt.

Churchill has encountered V. maritima in pine flatwoods on oolitic limestone and on the lee side of dunes, as well as in dune hollows, in flower and fruit in March and June. Norman (1976) calls it the "seaside verbena" and justifiably refers to it as already "rare".

VERBENA MARRUBIOIDES Cham.

Additional bibliography: Buek, Gen. Spec. Syn. Candoll. 3: 495. 1858; Moldenke, Phytologia 30: 154. 1975; Soukup, Biota 11: 19. 1976.

Recent collectors have encountered this plant along roadsides on campos and in "campo com pequeno banhado". The corollas are said to have been "red (5P6/8)" on Lindeman, Irgang, & Valls ICN. 8805 and "blue-purple (10PB5/8)" on Lindeman & Haas 2459.

Reineck & Czermak 21 is a mixture of V. marrubioides and V. humifusa Cham.

Additional citations: BRAZIL: Paraná: Lindeman & Haas 2459 (Ld.). Rio Grande do Sul: Lindeman, Irgang, & Valls ICN.8805 (Ut--320456); Reineck & Czermak 21, in part (Mu).

VERBENA MEDICINALIS Rojas

Additional & emended bibliography: Krapovickas, Bol. Soc. Argent. Bot. 11, Supl. 269. 1970; Moldenke, Phytologia 30: 154-155 (1975) and 31: 388. 1975.

VERBENA MEGAPOTAMICA Spreng.

Additional synonymy: Verbena phlogiflora ♀ macilenta Cham. ex Buek, Gen. Spec. Syn. Candoll. 3: 495. 1858.

Additional & emended bibliography: Loud., Hort. Brit., ed. 2, 552. 1832; Buek, Gen. Spec. Syn. Candoll. 3: 495. 1858; Bolkh., Grif., Matvej., & Zakhar., Chrom. Numb. Flow. Pl., imp. 1, 715 (1969) and imp. 2, 715. 1974; Moldenke, Phytologia 30: 155 & 178 (1975) and 36: 47. 1977.

The label on Krapovickas & Cristóbal 28956 bears the statement "en campos pantanosos, erecta, flores amarillas" — if the corolla color given here is correct this represents a remarkable undescribed color-form, but it seems more probable to me that it represents a mistake in memory or transcription.

The Hort. Parag. 11793 and T. Rojas 3406, distributed as V. megapotamica, actually are V. incisa Hook., while Duarte 6309, Herb. Brad. 16885 & 22512, Pabst 6093, and E. Pereira 6266 are V. phlogiflora Cham.

Additional citations: ARGENTINA: Corrientes: Krapovickas & Cristóbal 28956 (Ld.).

VERBENA MEGAPOTAMICA Spreng. x V. PULCHELLA Sweet

Additional bibliography: Moldenke, Phytologia 28: 255, 451, & 464. 1974.

VERBENA MENDOCINA R. A. Phil.

Additional & emended bibliography: Bolkh., Grif., Matvej., & Zak-

har., Chrom. Numb. Flow. Pl., imp. 1, 715 & 717 (1969) and imp. 2, 715 & 717. 1974; Moldenke, Phytologia 30: 155. 1975.

VERBENA MENTHAEFOLIA Benth.

Additional bibliography: Buek, Gen. Spec. Syn. Candoll. 3: 495 & 496. 1858; G. W. Thomas, Tex. Pl. Ecolog. Summ. 78. 1969; Moldenke, Phytologia 28: 355 & 362 (1974) and 30: 159. 1975; Hinton & Rzedowski, Anal. Esc. Nac. Cienc. Biol. 21: 31 & 111. 1975; Moldenke, Phytologia 36: 145. 1977.

Recent collectors have encountered this plant on rocky hills with thin gravelly soil and oak-pine grassland cover. Mears found it growing in association with Cassia, Mimosa, Juniperus, Solanum, Cuphea, Quercus, Indigofera, and Phoradendron. In Baja California it is reported by Moran as "occasional", "abundant in roadside depressions", "common in roadside ditches", and "locally common in several places on dry open southeast slopes", at 10 to 200 meters altitude, describing it as a "decumbent bush" or "prostrate". The corollas are described as having been "blue" on Moran 16643 & 18675, "blue-violet" on Moran 16098, 18563, & 21824, "purple" on Witham 783, and "light-blue, with white center" on Moran 22459. Thomas (1969) calls it the "mintleaf verbena", a singularly inappropriate name since its leaves do not resemble those of any typical mint with which I am familiar. The Baja California material ascribed to this species needs to be more carefully compared to V. comonduensis Moldenke, a closely related taxon.

Additional citations: CALIFORNIA: San Diego Co.: R. V. Moran 16098 (Sd-71707); Spencer s.n. [4.25.1916] (Mu-4318); Witham 783 (Sd-79855). MEXICO: Baja California: R. V. VERBENA MINUTIFLORA Briq.

Additional bibliography: Moldenke, Phytologia 28: 356 & 383 (1974) and 36: 36 & 123. 1977.

In addition to the months previously reported by me, this plant has been collected in fruit in March and October. It has been described by Lindeman & Haas as an almost leafless shrub, 1.5 m. tall, and the corollas on their no. 3010 are said to have been "purple" when fresh. On Lindeman ICN.9446 the collector notes "arbusto de 1.70 m., 1.5 cm. diam., corola roxa 10PB7/6", and it was encountered by him in a "pequeno banhado quase seco".

Davidse and his associates report that in Santa Catarina it is used in the treatment of stomach and digestive ailments.

Material of V. minutiflora has been misidentified and distributed in some herbaria as V. alata Sweet.

Additional citations: BRAZIL: Paraná: Hatschbach 37374 (Ld); Lindeman & Haas 3010 (Ws). Rio Grande do Sul: Lindeman ICN.9446 (Ut--320459). Santa Catarina: Davidse, Ramamoorthy, & Vital 11089 (Ld). ARGENTINA: Toledo Island: Ibarrola 739 (Ut--330572B).

VERBENA MOECHINA Moldenke

Additional synonymy: Verbena moenchina Moldenke ex R. A. Davidson, State Univ. Iowa Stud. Nat. Hist. 20 (2): 77, sphalm. 1959.

Additional bibliography: R. A. Davidson, State Univ. Iowa Stud. Nat. Hist. 20 (2): 77. 1959; Cooperrider, State Univ. Iowa Stud. Nat. Hist. 20 (5): 70. 1962; Moldenke, Phytologia 28: 356, 386, 387, 429, & 465 (1974), 34: 249 (1976), and 36: 29 & 47. 1977.

Tens encountered this hybrid along roadsides and in an abandoned quarry on limestone gravel in association with native prairie plants such as Asclepias verticillata, Andropogon gerardii, Eragrostis spectabilis, Kuhnia eupatorioides, Ratibida pinnata, Solidago nemoralis, and Verbena stricta, with Verbascum and Ambrosia invading. Davidson (1959) records the hybrid from Louisa and Muscatine Counties, Iowa, where he found it to be "infrequent" in dry sandy soil.

The Herb. Zuccarini s.n. [Hort. bot. Monac.] collection, cited below, is a mixture with V. stricta Vent.

Additional citations: WISCONSIN: Rock Co.: Tens 1431 (Ts, Ts,

Ts). MISSOURI: Reynolds Co.: Meebold 25420 (Mu). CULTIVATED: Germany: Herb. Zuccarini s.n. [Hort. bot. Monac.] (Mu—375, Mu—376).

VERBENA MONACENSIS Moldenke

Additional bibliography: Moldenke, Phytologia 28: 356, 394, & 451 (1974), 30: 133 (1975), and 34: 270. 1976; López-Palacios, Revist. Fac. Farm. Univ. Los Andes 17: 50. 1976; Moldenke, Phytologia 36: 40. 1977.

López-Palacios refers to this plant as an "hierba rastrera de unos 30 cms. Flores rosadas" and found it being cultivated at 1650 meters altitude, flowering in August.

Additional citations: CULTIVATED: Colombia: López-Palacios 3618 (Ld, N), 3862 (Tu); López-Palacios & Idrobo 3833 (Ac).

VERBENA MONTEVIDENSIS Spreng.

Additional & emended bibliography: Buek, Gen. Spec. Syn. Candoll. 3: 495. 1858; Bolkh., Grif, Matvej., & Zakhar., Chrom. Numb. Flow. Pl., imp. 1, 717 (1969) and imp. 2, 717. 1974; Moldenke, Phytologia 30: 155 (1975), 31: 377 (1975), and 36: 137. 1977.

The corollas on Ferreira 98, Hatschbach 35653, and Kummrow 764 are said to have been "lilac" in color when fresh, on Schinini & Carnevali 10471 they were "purple", and on Fiebrig 4635, Herb. Brad. 22518, Pabst 6146, and E. Pereira 6319 they were "violet".

Ferreira found the plant growing in "orla de brejo". Others have encountered it on high or marshy campos, in rough grassland, along roadsides, on headlands of ricefields and sugarcane fields, in bottomland soil, and in "brejo" (sedge meadows). Muhammad refers to it as "an erect perennial herb, infrequent in open fields maintained by fire", while Urbatsch found it "in roadside and railway right-of-way, aquatic marsh, and dryland habitats".

The corollas on Schinini & Cristóbal 9707 were "violet" in color when fresh, those on Quarín, Schinini, & González 2460 were "purple", those on Krapovickas, Cristóbal, & Schinini 26513 were "white-lilac", and those on Pedersen 9816 were "white".

Lindeman and his associates encountered this plant on a "campo estile pomar com árvores baixas de espinilo Acacia caven" and say on the label of their no. 8468 "corela 5RP8/4, calice em bota 5RP5/4". The vernacular name, "quina", is reported by Kummrow. Pedersen found the plant in flower and fruit in April.

VERBENA MONTICOLA Moldenke

Additional bibliography: Hocking, Excerpt. Bot. A. 26: 6. 1975; Moldenke, Phytologia 30: 155 (1975) and 31: 384. 1975.

VERBENA MULTICAULIS Raf.

This taxon is probably the same as V. simplex var. eggerti Moldenke. All previously published notes in this series under this heading should be transferred to that variety.

VERBENA NANA Moldenke

Additional bibliography: Moldenke, Phytologia 30: 155. 1975. The corollas on Fiebrig 4371 are said to have been "violet-rose" when fresh.

Additional citations: PARAGUAY: Fiebrig 4371 (Mu).

VERBENA NEOMEXICANA (A. Gray) Small

Additional synonymy: Verbena neomexicana var. neomexicana [A. Gray] apud Thomas, Tex. Pl. Ecolog. Summ. 78. 1969.

Additional & emended bibliography: G. W. Thomas, Tex. Pl. Ecolog. Summ. 78. 1969; Bolkh., Grif., Matvej., & Zakhar., Chrom. Numb. Flow. Pl., imp. 1, 717 (1969) and imp. 2, 717. 1974; E. H. Jordan, Checklist Organ Pipe Cact. Natl. Mon. 7. 1975; Moldenke, Phytologia 30: 138, 155-156, & 180 (1975), 31: 378 (1975), 34: 252 & 279 (1976), and 36: 124 & 158. 1977.

Sepple refers to this plant as "rare, in small clumps in dry stream bed". Mrs. Jordan (1975) calls it the "New Mexican vervain" and Thomas (1969) names it the "New Mexico verbena". Urbatsch and his associates aver that it is "uncommon in sandy soil" in Baja California.

Material of this species has been misidentified and distributed in some herbaria as V. gracilis Desf. or V. plicata Greene. On the other hand, the Spellenberg & Spellenberg 3984, distributed as typical V. neomexicana, seems better placed as var. hirtella Perry, while Reeves R.1131 and Wentworth 1061 are var. xylopeda Perry, C. A. Brown 7409 and Montz 2485 are xv. alleni Moldenke, Taylor & Taylor 6230 is V. menthaefolia Benth., Hess & Stickney 3406 and Higgins 9228 are V. perennis Wooton, S. Walker 76H37 is V. pinetorum Moldenke, and Meebold 26696 is V. racemosa Eggert.

VERBENA NEOMEXICANA var. **HIRTELLA** Perry

Additional bibliography: G. W. Thomas, Tex. Pl. Ecolog. Summ. 78. 1969; Moldenke, Phytologia 30: 138 & 156 (1975) and 34: 252. 1976.

Arnold found this plant growing on "steep gravelly hills and creek beds" in Coahuila. In Chihuahua the Spellenbergs encountered the plant "on grassy knolls with mostly ocotillo, creosotebush, *Yucca torreyi*, sotol, and *Hedysotis rubra*". In Baja California Moran found it "occasional in disturbed roadside soil" and "occasional on sandy flats", at altitudes of 575-1600 meters. Correll & Rollins encountered it "on gravel knolls along roadsides" in Texas.

The corollas are said to have been "deep-blue" on Moran 21749, "blue" on Correll & Rollins 23652 and Moran 20727, "blue-violet" on Moran 20748 and Spellenberg & Spellenberg 3984, and "lavender" on Moran 16893; they were also "blue" on Henrickson 5944.

Other recent collectors have found V. neomexicana var. hirtella growing in "calcareous gravel in chaparral on very steep slopes of limestone sierra", "in calcareous gravelly soil in matorral desértico microfilo on limestone slopes and limestone-conglomerate fan", "in rocky calcareous soil in crasirosulifolio espinosos izotal on steep slopes of metamorphosed shaly limestone", "in dark, sandy, grussy, gravelly loam on gentle slopes of extrusive igneous rock", "in sandy alluvium in matorral desértico inermis on gravel fans", "in calcareous gravelly soil in matorral con espinas laterales in canyons through limestone", "on rocky northeast-facing slopes", in "rocky soil of matorral on steep slopes of igneous rocks with chaparral and encinares (oak woods) higher up", in "rocky reddish clay soil of deserts", and in "limestone outcroppings in open Chihuahuan Desert", in association with *Yucca carnerosana*, *Agave parrasana*, *A. lecheguilla*, *Condalia warnockii*, *Berberis trifoliolata*, *Mammillaria meiacantha*, *Opuntia rufida*, *O. lindheimeri*, *Acacia rigidula*, *Vigueria stenoloba*, *Sagretzia wrightii*, *Dasylirion*, *Quercus*, *Lindleya*, *Krameria*, *Mimosa*, *Muhlenbergia*, *Pinus*, *Larrea*, *Jatropha*, *Parthenium*, *Leucophyllum*, *Ptelea*, *Garrya*, *Juglans*, *Flourensia*, *Buddleia*, *Fouquieria*, *Nama*, grasses, and numerous annuals. Henrickson found it "infrequent along highways".

VERBENA NEOMEXICANA var. XYLOPODA Perry

Additional bibliography: G. W. Thomas, Tex. Pl. Ecolog. Summ. 78. 1969; Moldenke, Phytologia 30: 156 & 180. 1975.

Recent collectors have encountered this variety on north-facing slopes with rock outcrops, calcareous stones and soils with scattered oaks, on rocky outcrops with Fouquieria, and in Cercocarpus breviflorus scrub on limestone bedrock.

Other collectors have found it growing in rocky limestone soil, in "sandy, grussy, gravelly loam in small creek canyons through extensive igneous rock", in "rocky soil in pastizal, badly degraded and in places invaded by shrubs", on "hill of igneous extrusives with partly volcanic ash red of red color", and in "grussy, gravelly, thin soil on rather steep hills of extrusive igneous rocks", growing in association with Parthenium incannum, Lippia graveolens, Jatropha dioica, Acacia neovernicosa, Bouteloua gracilis, Larrea, Quercus, Pinus, and Pseudotsuga.

In Baja California Moran reports this variety "locally common on open upper south slopes", "scarce on ridges", "occasional in granitic soil on rocky hillsides", and "a small colony on dry rocky slope", at altitudes of 1025—1240 meters. The corollas were "blue" on Moran 20983 & 22170, "blue-violet" on Moran 18264, "light-blue, paler in the center" on Moran 17658, and "purple" on Powell, Turner, & Sikes 2479.

The Wentworth collection cited below is a voucher for ecologic studies.

VERBENA NIGRICANS Rojas

Additional & emended bibliography: Krapovickas, Bol. Soc. Argent. Bot. 11, Supl. 269. 1970; Moldenke, Phytologia 30: 156 (1975) and 31: 388. 1975.

VERBENA NIVEA Moldenke

Additional synonymy: Glandularia nivea Mold. ex Moldenke, Phytologia 34: 274, in syn. 1976.

Additional bibliography: Moldenke, Phytologia 28: 357 (1974) and 34: 274. 1976.

In addition to the months previously reported by me, this plant has been collected in fruit in February.

The Legname & Vervoort 101, distributed as V. nivea, actually is V. microphylla H.B.K.

VERBENA OCCULTA Moldenke

Additional bibliography: Moldenke, Phytologia 23: 376—377 (1972) and 34: 258. 1976; Soukup, Biota 11: 19. 1976; Moldenke, Phytologia 36: 148. 1977.

Material of this species has been misidentified and distributed in some herbaria as V. calcicola Walp. and V. clavata Ruiz & Pav.

Recent collectors have encountered this plant "along water channels", in irrigated wheat fields, and "on granite substrate".

Lakela and her associates (1976) aver that in the Tampa Bay [Florida] area *V. officinalis* inhabits "trails, wooded lots, [and] burns", flowering from spring to fall, but it is most probable that the reference here is to *V. halei* Small.

Mrs. Clemens refers to *V. officinalis* as a "common weed" in Queensland. Hendricks 590, cited below, was "purchased in market place" in Durango, Mexico, and is questionably referred here — it may, instead, actually represent the top portion of a native Mexican species.

Hutchinson (1969) regards the *Verbenaceae* (of which *Verbena officinalis* is the type species of the type genus) as the culmination of the "fundamentally woody phylum, *Lignosae*" and therefore "at the end of the author's system" of classification of flowering plants (dicotyledons).

Sunding (1974) records *V. officinalis* from Santiago Island in the Cape Verde Islands, citing Sunding 2849, while Webb (1849) cites Hooker f. 120 from Santo Jacobi island. Saxena (1970) reports it as "Rare in open places" in India, citing Indorkar 11146. Kaul (1971) refers to it as an "Annual herb. Flowers pinkish white" and found it to be "rare" in Kashmir, India, flowering and fruiting there from June to August, citing Kaul 4624S. Strand (1756) records it from Palestine. Sonohara and his associates (1952) refer to it as "A perennial herb, common on plains; used for drugs" in Okinawa and records the common name, "kumatsuzura". Walker (1976) cites Hatusima 24199 from Yonaguni island. Lousley (1976) reports that in Surrey (England) it is "locally frequent" in "Chalk downs, quarries, waste places and roadsides, in dry places on chalk or gravel soils. Most common on the chalk."

The illustration given by Loewenfeld & Back (1974), purporting to depict V. officinalis, is horribly poor and most unrepresentative of that taxon. The illustration given by Schnitzlein (1856), purporting to be of V. supina L., seems to represent V. officinalis instead.

Friese (1933) comments that "A familia das Verbenaceas conta no Estado do Espírito Santo [Brazil] uma representante não descripta ainda, pertencente ao gênero Verbena, bem affim à especie V. officinalis L., em fórmia de subarbusto escandente, parcamente armado de espinhos; folhas oppostas e denteadas; inflorescencia em fórmia de espiga com flôres amarellas ou brancas; fruto drupáceo". This he follows with a description of the medicinal uses for the leaves, but it is most uncertain to what plant he is here referring: possibly a Lantana, but most certainly not Verbena officinalis!

Petélot (1953) affirms that V. officinalis "Répandue dans toutes les régions tempérées et même tropicales" [in Indochina]. "C'est une plante amère légèrement tonique. Au Centre-Vietnam, la plante est considérée comme amère et aromatique et Loureiro... signale qu'elle est employée en décoction contre l'hydropisie et en cataplasmes sur les tumeurs du scrotum. D'après le R. P. Robert, elle passe pour régulariser les menstrues et pour guérir la 'boule hystérique'. Pour cela, on en prépare une purée que l'on fait cuire et qui se prend avec de l'alcool de riz." The Chinese name for the plant there is "ma pien ts'ao", the Vietnamese name is "cò roi ngựa", and in Mexico the Mayan name is "chichi-antic".

Linnaeus (1737) says of this species "Crescit juxta areas & vias inque locis ruderatis per Belgium, Angliam, Galliam, &c." Breyne (1739) says of it "VERBENA vulgaris folio variegato; nobis In Horto Honestissimae Sapientissimae Matronae, Domine de Flines, collegimus. Verbenae Notae: 1) Flores tubulosi, in extremo vix galeati & labiati, in caulinum nec non ramorum summo, vel etiam in virgulisi longis e foliorum sede exsuntibus spicatum ut plurimum dispositi; 2) Calix foliolis constructus; 3) Semina quaterna oblonga."

In addition to the several hundred vernacular names recorded by me in previous installments of this series of notes, Rolland (1910) lists the following: "aelius", "auricula vermicina", "ayán nouthay", "barbântano", "barbénega", "barbâno", "barbêra", "barlenn", "benerea", "beneria", "berbeana", "bérbésy", "bèrbèn", "berbenaca", "bèrbéno", "bèrbiéno", "bèrmay'no", "bèrmeno", "biscopwurtil", "bona herba Veneris", "bonion", "bordéno", "botanica", "bouono barbéno", "brébouane", "centrum galli", "cincinalis", "clumbeina", "columbaire", "columbaria", "columbaris", "columbina recta", "columbyne", "créy'jéta", "créy'séta", "crijéta", "crista gallinacia", "crous", "dametra", "darbêno", "demedria", "demetina", "demetria", "diosatim", "diocatin", "eisebrich", "emagallis", "erba colombina", "erba de san-Gioan", "erba milzea", "erba minsaea", "erbo crougado", "erbo crusado", "erbo dé la mérbêlho", "erbo dé la rato", "erbo dé lo bérbêno".
